FOREWORD

السلام عليكم ورحمة الله وبركاته

الحمد لله رب العالمين، والصلاة والسلام على أشرف الأنبياء والمرسلين، سيدنا محمد وعلى آله وصحبه أجمعين، أمَّا بعد:

Alhamdulillah, all praises be upon Allah the Almighty, the Most Gracious and Most Merciful for His blessings that this Handbook of the Centre for Graduate Studies finally successfully published.

It is hoped that the publication of this handbook can provide a comprehensive reference for our Graduate students and the academicians from all Faculties/Centres.

Besides providing necessary guidance for our current students it is also giving significant information for our anticipating candidates who wish to join Graduate Studies in the future.

I would like to take this opportunity to express my sincere appreciation and thanks to all members of the Centre, Faculties/Centres' Head of Graduates Programme and every individual who contributed in publishing this handbook.

On behalf of Centre for Graduates Studies, I am hoping that your time as a student at Graduate Programme and UNISSA is successful and enjoyable.

وبالله التوفيق والهداية، والسلام عليكم ورحمة الله وبركاته

ASSOCIATE PROFESSOR DR ABDUL NASIR BIN HAJI ABDUL RANI

Director

Centre for Graduate Studies

Universiti Islam Sultan Sharif Ali

ABOUT US

The Centre was established in 2007. It was formerly known as the “Centre for Postgraduates Studies and Research”. In 2015, it was renamed to “Centre for Research and Publication”. The Centre is dedicated to graduate academic programmes. In 2019, the Centre was rebranded under the name “Centre for Graduate Studies” (CGS) as a hub for information, resources, and support for graduate and professional students.

VISION

- To become an academic centre of excellence in higher education in various disciplines of studies, and is committed towards achieving UNISSA’s vision to become an Islamic higher education hub in Asia.

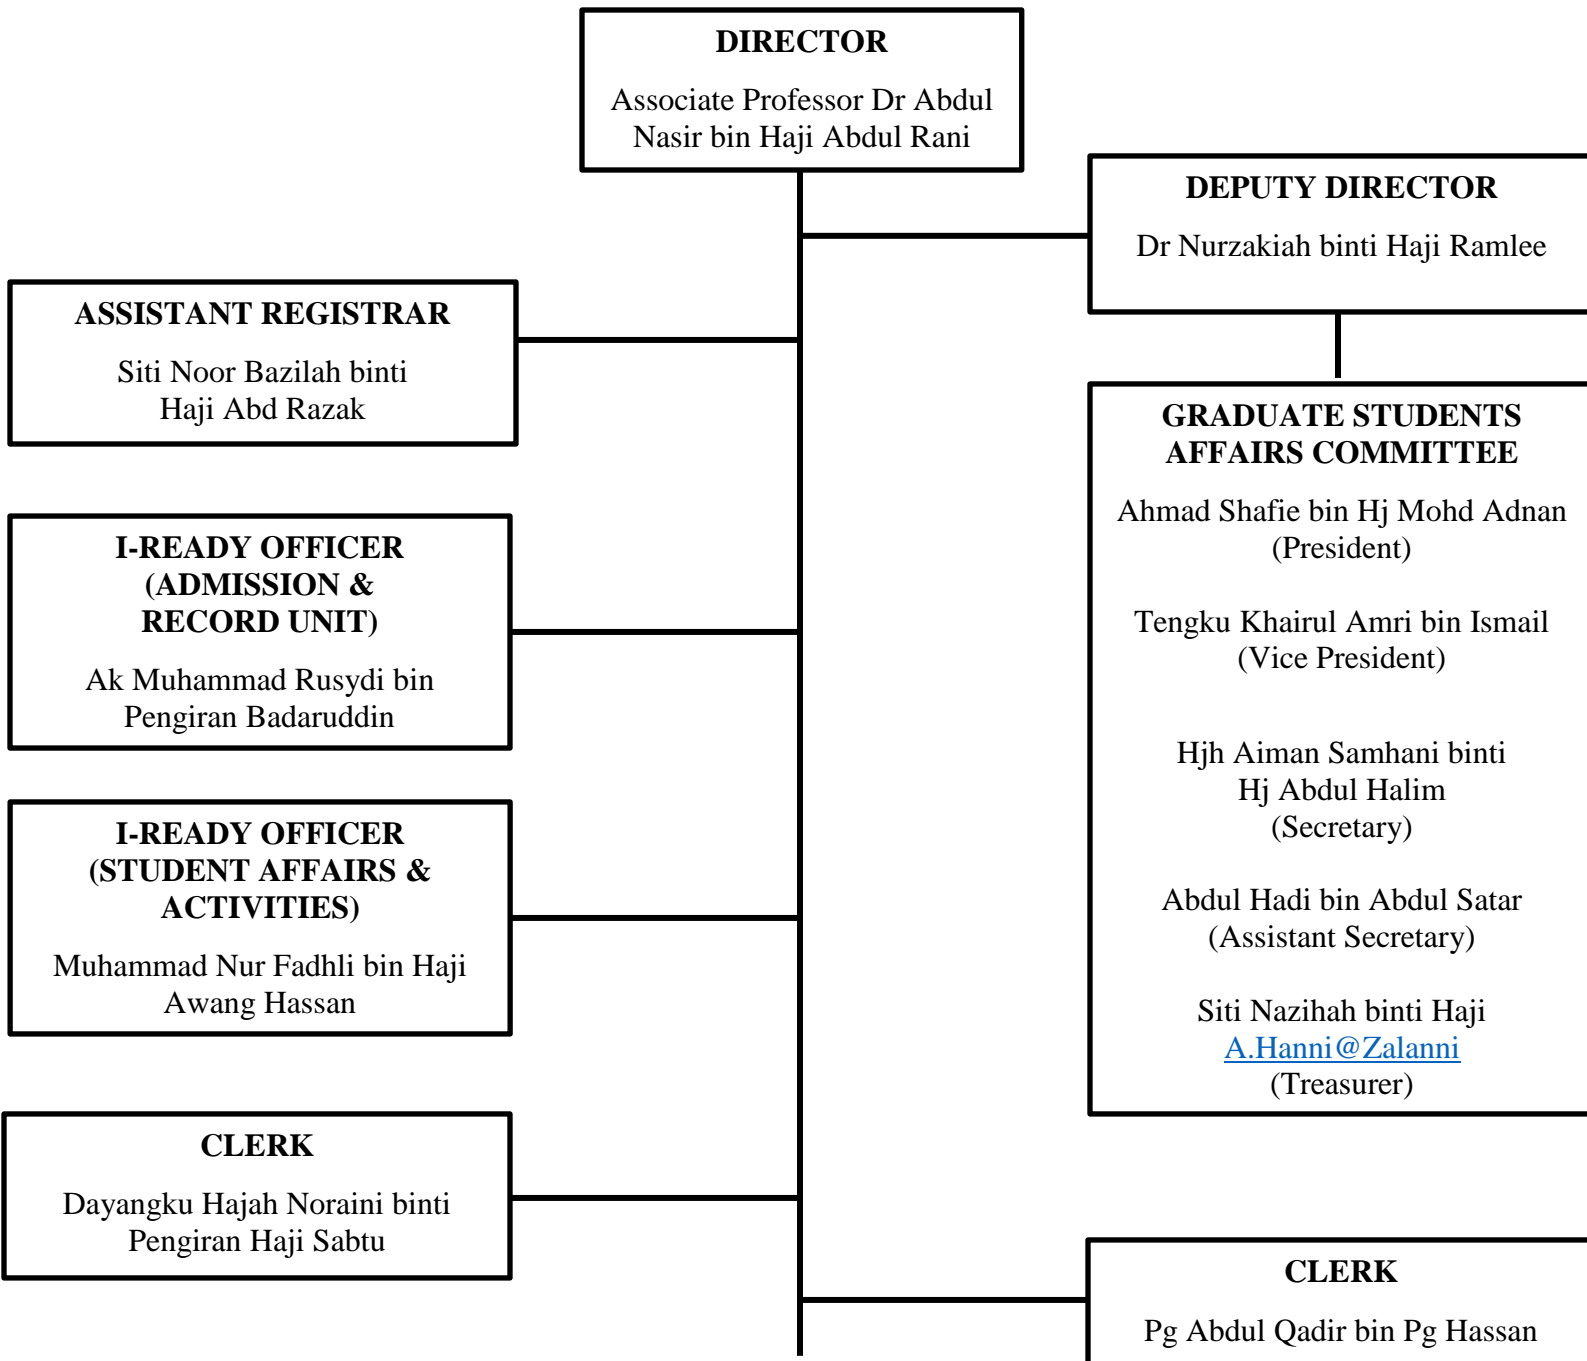

MISSION

- Mission towards an academic centre of excellence for higher education.

OBJECTIVES

- To provide a wide range of postgraduate programmes from graduate diploma and master degrees to doctor of philosophy.
- To plan and coordinate all matters of students’ admissions and to monitor the record progress of all graduate students.
- To plan and initiate academic activities in order to upgrade the quality of the programmes in UNISSA such as facilitating collaborative efforts between higher institutions in Brunei and others internationally.
- To contribute towards the enhancement of knowledge by integrating Islamic knowledge and values with acquired knowledge of pure science and human sciences.
- To promote interdisciplinary research among graduate students in the area of Islamic Studies and other relevant disciplines.

LM7307 INTELLECTUAL PROPERTY RIGHTS IN ISLAM

This course covers on topics to explain the protection of intellectual property under Sharia law. The programme approaches this subject not only historically but also analytically. This paper assesses the extent to which , Islamic law and its sophisticated tools have an impact on the protection of intellectual property. First it presents Shari'a's main sources; the Quran, the Sunna, explain how the principles derived therefrom can accommodate intellectual property protection. In particular, this course elaborates on the legal concepts that may provide a basis for intellectual property protection in Sharia by analyzing the present-day challenges of incorporating new types of intellectual property rights under Sharia. This also examines the reasons for the lack of sufficient protection for intellectual property rights in Arab countries considering that Sharia recognizes these rights in some form.

LM7320 INTRODUCTION TO INTELLECTUAL PROPERTY RIGHTS

The course covers the overall intellectual property law (as well as its international dimensions). It also discusses the concept of intellectual property rights; history; evolution; and its importance in the present context. The course also includes topics on the Berne Convention; Universal Copyright Convention; the Paris Convention; TRIPS; the World Intellectual Property Rights Organization; and the UNESCO.

FACULTY OF ISLAMIC TECHNOLOGY**PROGRAMME REQUIRED COURSES (PRC)****FT7302 Introduction to Islamic Technology**

This course introduces students to the developments in science and technology from the time they were formulated in and produced from the minds of previous Muslims. The existence of science and technology development has long been observed since the rise of ancient Egypt, Sumerians and China to the coming of Islam. In this course, students will also discuss the glorious Golden Age of Islam of which this effort is expected to pioneer reclamation in the field of science and technology as recorded in the history of past Islamic civilization where Muslims have made progress in science and technology since earlier ancient times. This is evident through the great contributions of Islamic scholars such as al-Khawarizmi, al-Kindi, Ibn Sina, Ibn Haitham and many others in various fields of knowledge. Respected scientists and scholars were found in various important fields including astronomy, mathematics, physics, biology and medicine. In fact, there are respected Islamic figures in general fields such as politics, education, architecture, engineering, IT, technology and even in the art of music.

FT7303 3D Real-time: Design, Development & Integration

This course is intended to be a next step in computer programming. Students will have experienced the use of Visual Basic to develop applications through the use of forms, controls, and events. This course will explore and develop structures for game programming through the use of the game engine Unity. Unity is both an Integrated Development Environment and a foundation for developing activities and games with much of the underlying code written and stored to be accessed by the developer (student). Students will understand the concept of the game engine platform that will allow for creating objects that will be stored in folders and ready for the final manipulation of an activity or game. These objects will be static background images that add interested to the layout of the project as well as 3D objects that will be game pieces. Scripting languages will be introduced that will allow the

student to manipulate and animate the game objects. Two specific languages will be introduced, JavaScript and C#. The Unity software and the software that accompanies the text have libraries of objects that are available to students at no cost. The addition of Blender and Gimp software will allow students to experiment with creating their own objects and manipulating the images to their specifications.

FT7304 Application of Internet of Things (IoT)

The Internet of Things (IoT) is becoming increasingly prevalent. It enables improved data gathering, networking, and analysis of data acquired by computers all over the world, pushing the boundaries of Machine-to-Machine communication to new heights. By explaining the concepts underpinning the Internet of Things and applying them to real-world problems, this course provides a foundation in the Internet of Things, including the components, tools, and analysis.

FT7305 Introduction to Physical Computing

This course is designed for students who are enthusiastic about their studies or who are interested in learning something new. With Arduino, anyone can rapidly learn the fundamentals of microcontrollers and sensors and begin making prototypes with very little expense. This course is designed to help students to get started with Arduino in a comfortable manner. Arduino is an open-source prototype platform with simple hardware and software. It comprises of a programmable circuit board (also known as a microcontroller) and ready-to-use software known as the Arduino IDE (Integrated Development Environment), which is used to develop and upload computer code to the physical board. Arduino provides a standard form factor that breaks the functions of the micro-controller into a more accessible package.

FT7306 Introduction to Big Data

Social scientists and survey researchers are increasingly challenged with combining data from different sources and expanding their work beyond experiments and surveys. This course will address these advancements and offer practical advice on merging computer science, statistics, and social science methodologies and tools. Techniques such as data-driven management and machine learning applications will be covered, as well as the linking of multiple records, privacy concerns, and informed consent problems. The course introduces social and data scientists to the most important big data technologies in a non-threatening manner, while also addressing research issues and objectives. The course uses real-world examples to demonstrate social science and data science principles, and it connects computer science concepts to real-world social science and survey research.

FT7312 Current Trends on Media and Communications Technology

This course enables students to draw on Islamic principles and knowledge in exploring emerging trends in media and communication technologies. Building upon theories and concepts in media and communication, students will examine trends and developments of communication technologies in mediating and shaping our everyday contemporary social life in an increasingly globalised world without borders. Using a critical analytical lens, students will map out the impact of the evolution of media and communication technologies from its onset right through this present day. Through this analysis, likely future trends in media and communication technologies can be considered.

FT7313 Multimedia Software Design

This course covers the fundamentals and methods of creating multimedia products. The course will cover the fundamentals of generating multimedia resources, including pedagogy, technology, and instructional design. Learning theories, instructional methodologies, and models will be addressed in the pedagogy section. By putting ideas into practice, instructional design will assist learners in creating multimedia resources. The students will also be introduced to cutting-edge technology that can be used in the design. Students will also be offered insights on teaching and learning innovations that could be included into the creation of multimedia resources.

FT7314 Creative Multimedia Technology

This course introduces students to the theory and fundamental concepts of digital graphic design, animation, audio, and video. The primary principle for each aspect will be taught, as well as how to apply it effectively in the development of multimedia applications and websites. Students will be taught how to use modern digital graphic, animation, audio, and video tools to create high-quality multimedia items utilizing diverse methodologies. This course also emphasizes the use of multimedia elements in the creation of high-quality instructional materials.

FT7315 Introduction to Machine Learning for Social Sciences

Machine Learning is a method of data analysis in which users create statistical models that "learn" from data to make accurate predictions and decisions. Machine learning algorithms are increasingly prevalent in a big data world, from customer-recommendation systems (think Netflix suggesting what movies you should watch) to policy creation and execution. Their

potential, on the other hand, is only now being explored in the social sciences, and only in a few and limited domains. The principles of machine learning as a data analysis approach will be covered in this course, as well as an overview of the most common and adaptable classes of ML algorithms in use today. Students will be able to choose which technique is best for their question and data, as well as how to develop, test, and analyze their models, by the end of the course. They'll also have enough fundamental understanding to tackle more sophisticated methods and challenges on their own. Since it is an introductory course, technicalities in math and programming will be kept to a minimum.

FT7316 Blockchain Technology: Fundamentals

Students will learn more about the history of blockchain, the most essential blockchain concepts, technological principles, the decentralized philosophy underlying blockchain, and the main discussions taking place within the blockchain environment in this course. Furthermore, students will gain a grasp of the many components of blockchain technology, allowing them to identify how to best harness and exploit blockchain for their project, company, or startup. Students will also complete a collaborative project and design a website for their fictional startup during the semester. Students will learn how to design their own digital currencies (no prior coding or technical knowledge required).
